Snow Management Systems

AceClamp

AceClamp's new VAB, the first variable angled bracket of its kind. The unique design allows the snow retention to follow the direction of the eave but swivels to attach to the varying angles of the roof panel ribs. This system makes it possible to accommodate complex installation scenarios and is available in left and right configurations. www.aceclamp.com

Alpine SnowGuards

Alpine SnowGuards offers many snow guard options for all metal roof types (standing seam, corrugated metal and through-fastened roofs). Our ASG4025 Pipe-Style system is a go-to for many roofing contractors installing snow management systems on metal standing seam roofing. All of our snow guards are tested extensively in the field by roofing experts and are made in the USA using recycled materials. Alpine SnowGuards offers a broad range of rooftop snow management solutions that can help a building qualify for Leadership in Energy

and Environmental Design (LEED) credits through the U.S. Green Buildings Council (USGBC). www.alpinesnowguards.com

Dynamic Fastener

Dynamic Fastener's Dyna-Guard snow retention system is designed to be used on metal roofs. Dyna-Guard is an 8' long extruded aluminum stick with a T-shape profile. Dyna-Guard is installed by attaching clamps or brackets to a metal roof and bolting the system to the clamps or brackets. Seven Dyna-Clamps with round-point set screws and two models of Sno-Dams are offered. Sno-Dams attach to the back of Dyna-Guard and inhibit snow and ice from sliding under it. A 2" wide painted strip of metal from the same material as the roof is inserted in the Dyna-Guard for aesthetics. www.dynamicfastener.com

HotEdge

HotEdge manufactures the next generation of metal roof ice prevention systems.

HotMetalPRO is the only UL Certified roof edge ice melt panel system engineered to install easily on all new construction or re-roof metal roof projects. The patented design raceway offers direct heat transfer to secure a commercial-grade heating cable making it the most energy-efficient system available. HotValleyPRO addresses ice problems common in metal roof valleys. www.hotedge.com

Isaiah Industries

Isaiah Industries' new Ice Dam Cutter gets to the root of troublesome ice problems on roofs by cutting vertical relief channels in the snow load, which allow any ponding water to drain off the roof. This easy-to-install system is a very affordable solution to ice dam issues, which can't be addressed by ventilation and insulation. It can be applied to most metal roofs as well as other materials. This system requires no special wiring and includes heat cables for gutters and downspouts. Available in several roof colors. www.isaiahindustries.com

Levi's Building Components

Choose a Snow Guard with long-lasting quality! Levi's Snow Defender series is your perfect choice for snow retention safety. The 4500 is designed for exposed fastener panel on 2 x 4 purlins and stands out due to its superior patented design
